Introduction

Thank you for choosing to purchase this quality product. To minimise the risk of injury, we ask you to always take some basic safety precautions when using this product. Please read this operating manual carefully and make sure that you understand it.

Keep these operation instructions in a safe place.

1. The offered water filter system is delivered with a **5 µ sediment filter** insert that removes reliably sand, rust, algae, and other floating particles from the water.
The **second filter stage** consists of an active carbon granulated filter cartridge and cleans drinking water from ozone, pesticides, rust, lime floating particles, and chlorine. Moreover, it reduces the concentration of heavy metals such as lead and copper.
The third filter stage consists of an active carbon block filter cartridge and cleans drinking water from ozone, pesticides, rust, lime floating particles, and chlorine and reduces the concentration of heavy metals such as lead and copper.
2. The different connections for the inlet and outlet can be chosen by the customer.
3. Open the casing and remove the filter cartridge. Remove the wrapping on the inside of the cartridge. Then place the filter cartridge back into the casing and close it again.
4. Check the connection between this product and everything connected to it.
5. Connect the feed to the tap and ensure that its positioning is secure.
6. Open the tap. The water will be redirected from the pipe through the filter system from where it will flow out of the opening valve.
7. The used water filter inserts and cartridges need to be exchanged according to the water quality in regular intervals. The sediment and activated carbon filters cannot be washed out and need to be replaced approximately every 6 months.

Important Note:

Reproduction and any commercial use (of parts) of this operating manual, requires a written permission of WilTec Wildanger Technik GmbH.
