## Instructions on how to remove and re-install the crankshaft seal

### *Removing the crankcase seal*

1. Place the puller legs into the inner diameter of the seal.
2. Insert the heads of the puller legs into the puller beam and place the pressure screw onto the end of the crank.
3. Turn the screw to remove the seal.

### *Re-installing the seal onto the crankcase*

1. For re-installing, use the existing vehicle bolt.
2. Select the correct size of adapter to fit the bolt and oil seal.
3. Put the bolt and screw adapter together with fixed ring.
4. Choose the adapter with correct size to fit the diameter of oil seal. If the existing bolt is too long, use the thread with the long silver adapter.
5. Using a hand spanner, press the new seal back into place.

 **Note:** Some cam seals are screwed to prevent them being removed. Do not attempt to use this tool by force.
